

REGIN BMS SOLUTIONS

Regin BMS Solutions provides an intuitive tool for efficient building maintenance and long-term energy efficiency.

EASIER. FASTER. ALWAYS COST- EFFECTIVE.

AUTUMN 2020 MARKS THE LAUNCH of a new way of thinking and working with building automation and maintenance. Not only does Regin BMS Solutions offer smart workflows and highly efficient maintenance – it also makes way for long-term energy savings and creates motivated teams in every part of the organization.

Regin BMS Solutions is developed in close cooperation with operating technicians, caretakers, operation managers and property owners, always with a user perspective: "Your needs in your daily workflow".

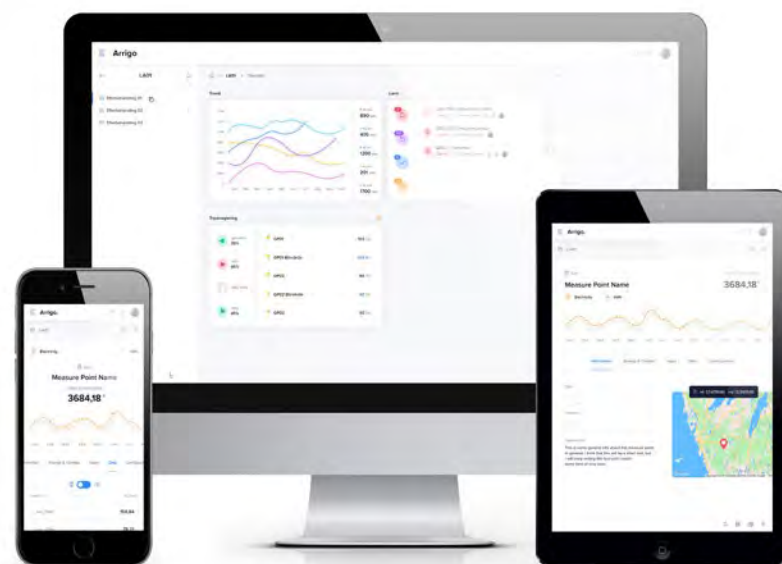

Perhaps it's the need of quick and easy overviews and full control of all your buildings, alarm-lists for separate applications, or last weeks energy trends compared to the yearly energy usage. Whatever the need, put your trust in Regin BMS Solutions and the powerful and elastic Arrigo platform.

*»Your needs
in your daily
workflow.«*

AN INTUITIVE INTERFACE – FOR **ALL** USERS.

REGIN BMS SOLUTIONS is developed on the powerful Arrigo platform welcoming the user to an intuitive and modern interface that is enjoyable to work with. Arrigo's user interface is responsive and supports your workflow regardless if you're on a large monitor, a laptop or a smart device.

With Arrigo's interface, it's easy accessing your historical data and trends or just checking your to-do lists according to your own preferences.

SPEND YOUR ENGINEERING TIME **MORE** WISELY.

THANKS TO THE SHIFT from a technical perspective towards a more functional and operational approach, Regin BMS Solutions focuses on relevant and demanded functions that create effective development and reduces expensive engineering time. Today, most software and systems in building automation are built around the SCADA-graphic. As a consequence, just introducing one new function often requires a time-consuming redrawing of multiple graphics. With Regin BMS Solutions, your engineering time is better spent on implementing functions that actually improve your facilities to deliver clarity and control.

Regin BMS Solutions is packed with great functions that improve your facility management as well as your supervision and control.

ARRIGO = PROFITABILITY

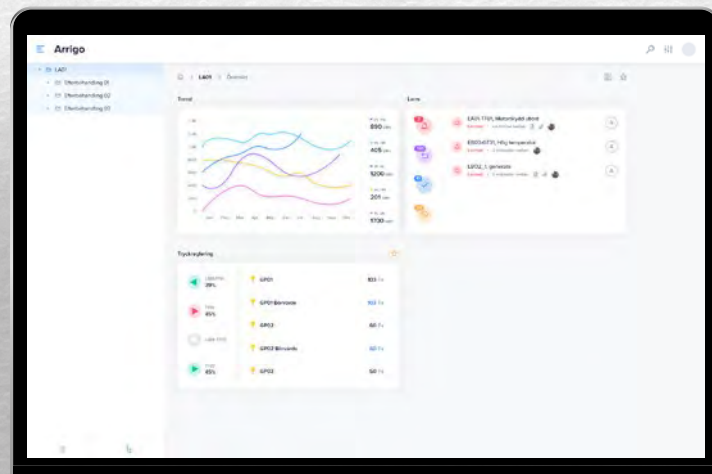

BY USING THE POWERFUL AND ELASTIC Arrigo platform property owners and developers can create reliable, intelligent and energy-efficient buildings. The Arrigo platform is developed in close cooperation with property owners looking for new ways to profit from effective maintenance and long-term energy savings.

Intelligent and adaptive Dashboards

In Arrigo's interface there are many features supporting intelligent building automation and control. At the centre, there is a smart and adaptive Dashboard presenting only the relevant functions in your workflow and for your role and responsibility.

Discover the benefits of Widgets

Arrigo's user interface is filled with smart functions called *widgets*. There are ready-made widgets for everything from managing alarms to monitoring energy trends, and not least, dynamic widgets that can easily be adapted to your specific needs. On the Dashboard, it's easy to create shortcuts to the widgets you need to make your day run more smoothly.

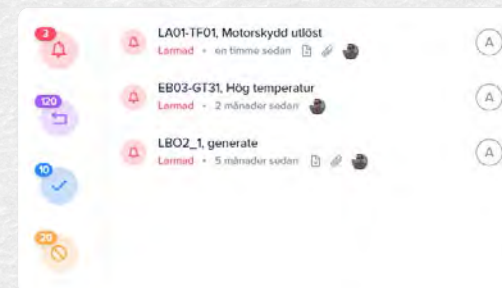

DASHBOARD

RESPONSIVE DESIGN

Discover the smartest functions in new Arrigo!

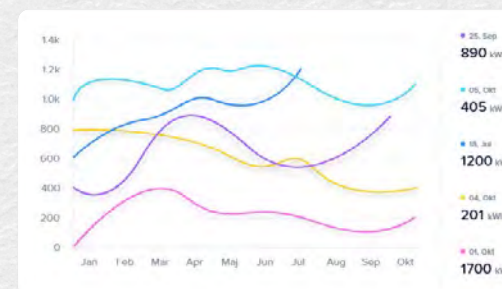

- ✓ **Adapt your Dashboard** – make widgets favourites, and save personalized views for various situations.
- ✓ **Filter** on geography, areas, residential areas, properties and choose your desired level of data presentation.
- ✓ **Get quick access** to logs, trends and historical data.
- ✓ **Be in full control** of every datapoint no matter the application.
- ✓ **Smart alarm-lists** shows alarms for specific properties or collected lists for whole divisions in priority order.
- ✓ **View and compare** your energy usage to the previous week, month or year – or by building type.

DYNAMIC WIDGETS

GET STARTED WITH REGIN'S BMS.

OPERATING TECHNICIAN

- Overview for control
- Fast way to alarms and support tickets
- Fast access to logged data

OPERATING MANAGER

- Knowing who's doing what
- Reports to management
- Overview of priorities

PROPERTY OWNER

- Overview of energy usage
- Lowered net operation cost over time
- Dedicated staff that want to make a difference

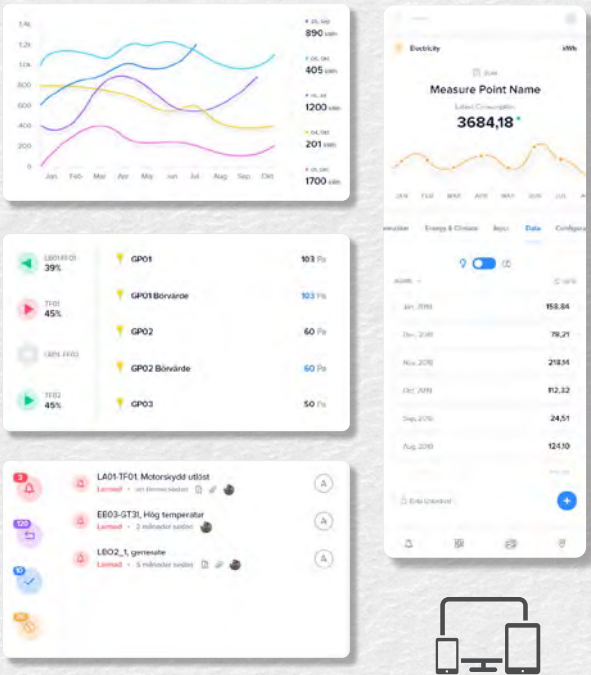

OPERATION & MAINTENANCE

What are the decisive functions that make your workflow both efficient and engaging?

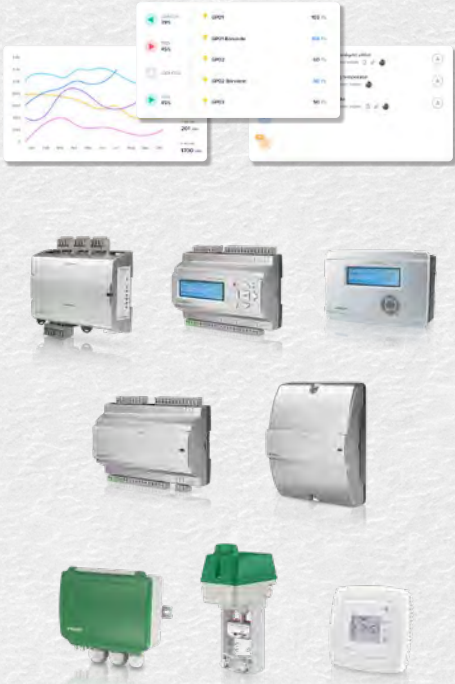

ENERGY OPTIMIZATION

What should we measure, and how should we analyse it, to ensure long-term optimization?

BUILDING MANAGEMENT

Based on your analysis – Implement the best functions and create excellent automation from day one.

SHORT & LONG-TERM ENERGY SAVINGS

When everything is in place, the real work begins – a long-term and persistent effort to reduce energy usage, without impacting comfort.

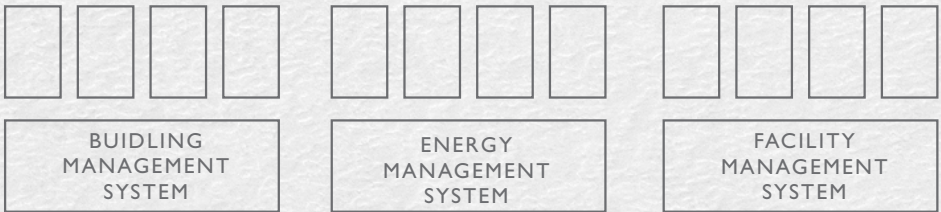

OPTIMIZATION & EFFICIENCY

It's up to you as Operating Manager or Property Owner to decide what you want to manage yourself and what can be outsourced to your automation partner via cloud services.

A POWERFUL PLATFORM FOR ANY FUTURE CHALLENGES.

THE ARRIGO PLATFORM OFFERS a whole suite of features and services for efficient building automation. You can already benefit from Arrigo's EMS (Energy Management System) as a separate cloud service, and there is much more to come. Simply put, Arrigo will continue to be the best place to gather all your data and use it to improve efficiency and profitability in your line of business. One single platform for BMS, EMS and FMS and always focusing on functions and intelligent automation – that's Arrigo.
